All values are expressed as % (w/w), which is a percentage of the total weight of the sample that you submitted. For instance, if your sample had 5% THCA, there would be 5 grams of THCA in every 100 grams of sample. The percentages do not add up to 100% because there are many other things in the samples, like terpenoids, chlorophyll, water, and the plant's structural components.
